Sequence 36, Application US/09629222A

Patent No. 6599700

GENERAL INFORMATION:
APPLICANT: Bellacosa, Alfonso
ITILE OF INVENTION: Methods for Detection of Transition
ITILE OF INVENTION: Single-Nucleotide Polymorphisns
CURRENT APPLICATION NUMBER: US/09/629,222A

CURRENT FILING DATE: 2000-07-31
PRIOR APPLICATION NUMBER: 09/463,891
PRIOR APPLICATION NUMBER: PCT/US98/15828
PRIOR APPLICATION NUMBER: PCT/US98/15828
PRIOR APPLICATION NUMBER: 60/053,936
PRIOR FILING DATE: 1998-07-28

NUMBER OF SEQ ID NOS: 73
SOFTWARE: FastSEQ for Windows Version 3.0

LENTTH: 188

; Patent No. 6562958
; GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER FILE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/328,352
; CURRENT FILING DATE: 1999-06-04
; SEQ ID NO 4982
; LENCTH: 346
; TYPE: PRT
; ORGANISM: Acinetobacter baumannii
US-09-328-352-4982
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
